

MIRACULOUS RECOVERY

This is the article that appeared in the May 2025 edition of Catalyst, our monthly journal. The date that prints out reflects the day that it was uploaded to our website. For a more accurate date of when the article was first published, check out the news release, [here](#).

Michael P. McDonald

Anthony Foti is the web designer that keeps our website firing on full cylinders. He is a man of deep faith. He and his family attend the Latin Mass, and together with his wife, he has instilled the Catholic faith deep in the hearts of his children. But last year, Anthony and his family's faith would get them through tragedy and triumph.

Their ordeal started around Easter last year. The Foti household came down with some illness. It seemed pretty standard, and about a week later, it seemed like it had run its course. However, it lingered in his young daughter Maria.

They took Maria to the pediatrician several times due to ongoing fever and unusual pain in her back. Maria underwent strep and blood count tests and all the normal stuff you would do for a child with a virus. During that week, Maria complained of back pains, which progressively got worse, but they were not constant leading her pediatrician to believe it was body aches that you get from being sick.

But by Sunday, April 7, this back pain appeared to be more than just a body ache. Maria woke up complaining of severe back pain and a stiff neck. They quickly took Maria to the hospital where she had a few exams and was sent home.

By the next morning, her condition had deteriorated. Maria could not stand up. They took her back to the hospital. This time the tests revealed Maria had an extremely high bacteria count in her system, and an MRI uncovered a massive abscess along six of her spinal disks, which was causing compression

on her spinal cord. Maria was transferred to Cohen's Children's Hospital where a pediatric neurosurgeon awaited to perform emergency spinal surgery.

While Anthony waited during those agonizing hours, he prayed with all his might. As family and friends reached out to help, he asked them to pray for Maria. A home cooked dinner is appreciated, but what Maria really needed now was their prayers he told them.

After several grueling hours, the head neurosurgeon came out to speak with Anthony and his wife. The surgeon informed them that he was able to remove the abscess from Maria's spine, but she would be completely paralyzed from the waist down. The surgeon said he was not particularly religious, but if they were praying people, they should start praying.

Anthony threw his whole heart and soul into those prayers. He constantly prayed the Rosary, beseeching the Blessed Mother for aid. He asked every saint he could think of to intercede on behalf of his daughter. A cousin reached out to let Anthony know that she had access to a first class relic of St. Gemma Galgani, the patron saint of back surgery, and she would bring it to him so that Maria could pray with it. Interestingly, the feast of St. Gemma coincided with Maria's stay in the hospital, and what happened next, Anthony attributes to the intercession of St. Gemma.

Approximately 24 hours after the surgery, Maria started to wiggle her toes. According to all the doctors and the experts, she should not have been able to do that. But she was, and later that night she was able to lift her knee up. A few days later, Maria was able to walk with assistance. Her medical team was astounded by her speedy recovery.

On April 12, Maria had a follow-up MRI. Anthony remembers waiting beside his little girl and praying the Rosary with all his strength. He felt this awe come over him as though the

Mysteries were coming to life. Suddenly, he saw Maria in the MRI kicking and moving her lower body as if she was re-growing the synapses, and he knew that God was healing her. He prayed even harder.

The neurosurgeon began calling Maria the “Miracle Girl.” Even he was convinced Maria’s recovery was more than just modern medicine at work. On April 17, Maria was discharged from the hospital. She would go on to an inpatient rehab facility where she would spend 10 days. By the end of April, Maria was home with her family.

She would continue on with physical therapy for the rest of the year. At one of her appointments, an infectious disease doctor wanted to see how she was recovering. He told Anthony that what Maria had was extremely rare. In fact, there were only 22 cases of pediatric epidural abscess in medical literature. When he saw Maria moving around he was amazed.

A couple months later, Maria was being evaluated by a neuropsychologist. After reading her medical history, the doctor was amazed that Maria could move around normally. This expert asked Anthony a very familiar question: were they, by chance, religious?

It has been a year since Maria’s sickness, and she has made a full recovery. While the secular experts cannot explain it, those of us who keep the Catholic faith can see the hand of Providence in her recovery. As it says in James [5:15], “And the prayer of faith will save the sick person, and the Lord will raise him up.”
